FEATURES

Presentations

You can upload multiple documents in PDF or Microsoft office document and switch between them during the conference. All the participants can see the current slides as the presenter moves through the presentation.

Documents Sharing

Presenters can share their desktop with other participants. This allows you to demonstrate activities in any application you have on your local machine, including the browser. You have the option to share the portion of your desktop or the entire screen.

White Board with Text Tools

The in built whiteboard tools allow you to zoom, highlight, draw and write on your presentation to make your point clear.

Users

The list of participants , on the top left panel display their respective role (viewer, presenter or moderator). You can mute or un-mute participants in the conference. You can also eject the participants from the conference. It also has the “raise hand” feature to get the attention of a presenter or moderator.

Voiceover WebRTC

Leap and bounds beyond our present communications and collaboration environment, WebRTC uses opus audio CODEC that produces high fidelity voice. It is adaptive network solution that compensates and adjust to changing network conditions.

Chat

The chat panel allows all the participants to conduct public or private chat. The private chat is implemented in a separate tab to avoid any accidental back channel incidents. The size of the font can also be altered on user basis.

Record and Playback

Record your conference at any point of time for future reference. Playback or share the recordings with your participants anytime.

Bandwidth Recommendation for Premise Based

Moderator: 1MB Download & Upload

Member: 1MB Download & Upload
